About us

Startups are born everywhere; Silicon Valley has its legends, Berlin and London fuel their unicorns. But sometimes, real tech chaos begins when you put two engineers and close friends together, give them a 30+ person team, and a navy client from the Southern Hemisphere.

We are **Qodix**, a team that doesn't fit the traditional tech mold, and that's exactly why it works. We build scalable software products, develop smart access solutions, and help businesses rethink how technology drives their growth.

Always moving fast, building smart, and thinking ahead.

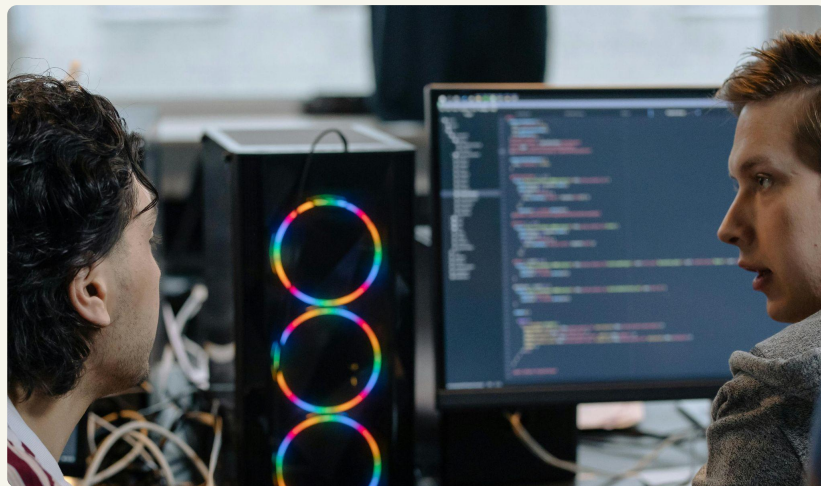

The Qodix team

5 years after our start, we are a tight-knit team of **30+ engineers, designers, and product thinkers** working across **Europe, Africa, and South America**.

From **startups** to **scale-ups**, we bring deep technical expertise, a startup mindset, and a collaborative spirit to every project.

Each of our engineers brings an **average of 7+ years of experience** across technologies and industries, building lean, senior-led teams that move fast, communicate clearly, and deliver with confidence.

Our global footprint

We've delivered solutions for clients across Europe, Africa, and North America - supporting startups, enterprises, and institutions in fintech, e-commerce, logistics, greentech, and more. Our global reach reflects the versatility of our team and the trust our clients place in us.

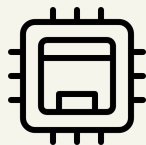

Industry focus

Cloud SaaS

Platforms

We build secure, scalable cloud SaaS platforms designed for modern businesses. Our focus is on performance, reliability, and seamless integration, delivering flexible solutions that grow with your needs.

Hardware &

IoT

We develop integrated solutions that connect hardware with smart software. From device firmware to cloud connectivity, we bring IoT products to life with reliable, real-time data and seamless user control

Transport &

Logistics

Smart, efficient systems for managing fleets, routes, and supply chains. Our solutions help logistics companies optimize operations, track assets in real time, and deliver better customer service

Coworking &

Smart Access Systems

We develop secure and flexible access solutions for coworking spaces, villas, hotels, and other shared properties. With 24/7 control, automation, and real-time monitoring, we make managing entry simple, efficient, and reliable

Industry focus

Fintech &

Payments

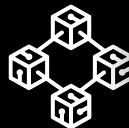

We build secure, scalable solutions for digital wallets, payments, and tokenization. Our focus is on innovation, compliance, and seamless user experiences in the fast-moving fintech world

E-commerce &

Retail

We create fast, intuitive, and scalable platforms that help brands grow online. From storefronts to backend systems, we deliver seamless shopping experiences that drive engagement and sales

Blockchain &

Tokenization

We develop secure, transparent blockchain solutions for asset tokenization, digital identity, and decentralized platforms. Our focus is on real-world use cases that bring trust and efficiency to emerging markets

GreenTech &

SCADA systems

We support sustainable innovation by building smart monitoring and control systems for renewable energy. Our SCADA solutions enable real-time data, automation, and efficiency in solar, wind, and other green technologies

How we work

From idea to scalable product

1

Discovery & Planning

We align with your goals, analyze requirements, and define a roadmap tailored to your business needs.

2

UX/UI Design

User-focused design with wireframes and prototypes that balance usability, branding, and functionality.

3

Development

Full-stack, iterative development using modern tools and frameworks, flexible for both MVPs and large-scale systems.

4

Testing & QA

Rigorous manual and automated testing ensures stability, performance, and security at every release stage.

5

Deployment & DevOps

Automated deployments, scalable infrastructure, and CI/CD pipelines for smooth, reliable releases.

6

Support & Growth

We stay involved post-launch with maintenance, performance monitoring, and feature evolution based on real-world use.

Engagement models

Flexible engagement models tailored to your business goals, project scope, timeline, and internal team structure. Whether you're building an MVP, scaling a mature product, or need long-term support, we adapt to your pace and priorities, offering the right model to keep things efficient, transparent, and collaborative.

Dedicated Team

We provide a handpicked team that works as an extension of your company, ideal for long-term collaboration and full control over the process.

Time & Material

Pay only for the time and resources used. Best for evolving projects, MVPs, or when flexibility is key.

Fixed Price

Clearly defined scope and deliverables with a set budget. Perfect for small-to-mid projects with well-established requirements.

Phased Delivery

Structured delivery in phases: discovery, MVP, and full-scale rollout, ensuring control, clarity, and success.

What sets us apart

We don't just write code; we become your technical partner, focused on long-term success, not short-term delivery.

What sets us apart

Startup mindset, enterprise quality

Agile, fast-moving, and cost-efficient, without compromising stability, security, or scalability.

Relationship driven approach

We aim for long-term partnerships, not one-off projects. Many of our clients stay with us for years.

Lean, senior-heavy teams

Small, focused teams with high impact, led by experienced engineers and product thinkers.

Full-cycle product thinking

From idea to deployment, we support every stage of your journey with business, design, and tech expertise.

Flexible collaboration

Engagement models that match your workflow, with transparent communication and shared ownership of outcomes.

What we build

We use a modern and flexible tech stack tailored to each project's goals, covering web and mobile app development, backend systems, cloud infrastructure, DevOps, and IoT integration. Our focus is on building scalable, secure, and high-performing solutions that grow with your business, no matter the platform or device.

Portfolio

Explore real-world examples of our full-cycle custom software development services.

We're proud to share case studies from some of our most impactful projects, showing how we've helped clients unlock new revenue streams, scale faster, and reach new frontiers through smart, tailored tech solutions.

Real world examples

ReliMail

A secure, affordable email platform with custom domains, built for businesses that value privacy and control.

Damrev

ISO 20022 blockchain tokenization of real-world assets, enabling secure, transparent, and compliant global investments.

Orbiko

Merging gold's stability with blockchain speed - now offering silver and platinum as tokenized investments.

SEO-optimized e-commerce platform

High-performance, SEO-driven platform with CMS integration-enhanced speed, organic traffic, and user engagement.

Cleaning Services Management System

Custom scheduling platform with drag-and-drop appointment planning, real-time cleaner tracking, and salary management.

Macedonian Online Payment Provider

Built a compliant, bank-integrated payment platform with government KYC integrations and national bank transaction tracking.

Real world examples

QOAS

QOAS is a smart access system enabling secure 24/7 entry via app, QR code, or PIN - ideal for coworking spaces and villas.

E-learning platform

Innovative e-learning platform with face detection to track student engagement and satisfaction in real time.

Enzymes dosing pump

Automated enzyme dosing pump for precise fuel treatment, efficiency improvement, and reduced environmental impact.

Solar panels monitoring system

Real-time solar panel monitoring system for performance tracking, fault detection, and energy optimization.

Transport & Cargo Software Solution

Real-time truck tracking, route optimization, cargo monitoring, and integrated payment management for efficient transport operations.

Real-Time Money Transfer App

Real-time money transfer app with WhatsApp bot for fast, secure, and compliant cross-border payments and support.

Case study

DAMREV fintech & blockchain

Challenge

Build a secure, scalable platform to tokenize real-world assets while ensuring compliance and investor trust.

Solution

We developed DAMREV, a modular platform supporting ISO 20022 tokenization, smart contracts, and KYC for diverse assets.

Delivery

Full blockchain-based platform, including a mobile app, admin portal, developer API, marketplace, and Stellar explorer, with a 6-person team.

Launched a secure, compliant platform that tokenizes real-world assets and enables global, blockchain-based investment opportunities.

Case study

SEO-focussed ecommerce & retail platform

Challenge

Improve the speed, structure, and SEO quality of dynamically generated landing pages across various e-commerce platforms.

Solution

Using the basics of web development, we optimize the e-commerce applications, optimizing them for Google Lighthouse metrics and clean SEO structure.

Delivery

Ongoing collaboration involving continuous page optimization and integration work, supporting multiple clients simultaneously with scalable delivery and SEO impact.

Provides high-performing landing pages for e-commerce businesses. We support our clients mission by optimizing page performance and SEO at scale.

Case study

Cleaning Services management tool

Challenge

Replace spreadsheets and manual coordination with a centralized system to manage cleaners, appointments, salaries, and vacations in real time.

Solution

We built a custom platform with drag-and-drop scheduling, role-based access, cleaner tracking, and tools for managing payments, vacations, and communication.

Delivery

A full admin portal used daily by dispatchers, plus mobile apps for cleaners and customers. Scalable for regional expansion.

A regional cleaning services company operating across multiple Belgian cities needed a platform to manage appointments, teams, and operations efficiently.

Case study

Macedonian Online payment provider

Challenge

Develop a secure, scalable system with bank integrations, automated KYC processes, and national bank reporting capabilities.

Solution

We built a compliant platform with payment processing, government KYC integrations, and transaction tracking tied to the national bank.

Delivery

A mobile and web-based platform with admin tools and a user dashboard, designed for speed, security, and future integration with regional services.

A fintech startup in North Macedonia needed a compliant digital payment platform tailored to local banking and regulatory requirements.

Case study

QOAS

smart access system

Challenge

Create a secure, receptionist-free access solution that enables 24/7 entry and remote management.

Solution

We developed a smart system combining mobile app access, QR codes, and PIN entry, supporting user tracking and temporary guest permissions.

Delivery

Successfully deployed in our coworking space, QOAS is scalable and ready for residential and commercial adoption through the mobile and web application.

QOAS is Qodix's proprietary hardware-software access control system used in coworking spaces, villas, and other shared environments.

Case study

ReliMail privacy focused email

Challenge

Provide a cost-effective email solution with reliable performance, domain customization, and full data control without relying on big tech providers.

Solution

We built a cloud-based platform for email hosting with custom domain support, admin management, and secure, spam-resistant delivery.

Delivery

Deployed as a live SaaS product, ReliMail is currently in use and ready to scale across privacy-conscious organizations.

ReliMail is a lightweight, secure email platform developed by Qodix for businesses needing affordable, privacy-first email with custom domains.

Web App Development

Angular

Typescript

Javascript

Vanilla Web
Development

PWA

We craft responsive, high-performance web applications tailored to your business needs. From intuitive user interfaces to powerful backend integrations, our web solutions are designed for scalability, security, and long-term success.

Backend Development

Node.js

Python

GoLang

REST

gRPC

We build robust, scalable, and secure backend systems that power modern applications. Whether it's APIs, databases, or complex business logic, our backend solutions are designed for performance, reliability, and easy integration with front-end and third-party services.

DevOps & Cloud Migration

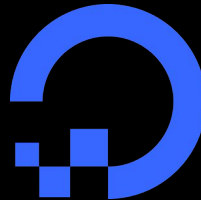

AWS

Azure

Google Cloud

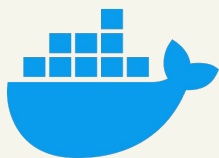

Digital Ocean

Vultr

We streamline development and deployment through automated DevOps practices and scalable cloud infrastructure. From CI/CD pipelines to full cloud migration, we help businesses improve reliability, reduce downtime, and scale with confidence on platforms like AWS, Azure, and GCP.

Infrastructure & Deployment

Docker

Helm

ANSIBLE

Ansible

Terraform

Kubernetes

We leverage modern tools like Helm, Ansible, Terraform, Kubernetes, and Docker to automate, manage, and scale infrastructure efficiently. From containerization and orchestration to infrastructure-as-code and configuration management, these technologies help us ensure reliable deployments, faster iterations, and seamless scalability in cloud-native environments.

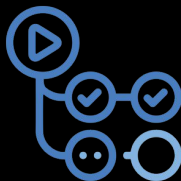

CI/CD & Automation

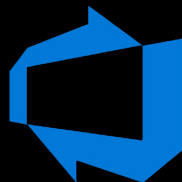

Argo

GitLab CI

GitHub Actions

Azure DevOps

Flux CD

We use powerful automation tools like Argo, GitLab CI, and GitHub Actions to streamline development workflows. These platforms enable continuous integration and delivery, automated testing, and faster, more reliable deployments, helping teams ship quality code with confidence and speed.

Databases

MongoDB

OpenSearch

Redis

We work with modern databases like MongoDB, OpenSearch, and Redis to handle everything from structured data to real-time caching and advanced search. This allows us to build responsive, data-driven applications that scale efficiently and deliver fast, reliable performance.

Mobile App Development

Flutter

Dart

We create fast, intuitive, and reliable cross-platform mobile apps for both iOS and Android. Our mobile solutions are built to deliver smooth user experiences, strong performance, and seamless integration with backend systems.

UX/UI & Research

Figma

Adobe XD

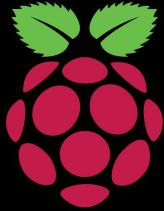

Illustrator

We design intuitive, user-centered interfaces backed by thoughtful research and testing. Our process combines usability, aesthetics, and business goals to create digital experiences that are both engaging and effective, ensuring every interaction feels seamless and purposeful.

Hardware & IoT

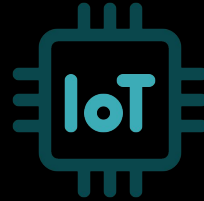

Arduino

Raspberry Pi

ESP32/ESP8266

Custom IoT integrations

We bridge the gap between physical devices and digital systems by developing smart, connected IoT solutions. From firmware to cloud integration, we enable real-time data exchange, remote control, and automation, turning hardware into intelligent, responsive systems.
