QODIX

CORPORATE PROFILE · 2026

Got complex processes?

We turn them into software that just works.

qodix.dev Based in N. Macedonia. Trusted globally.

ABOUT US

A team that doesn't fit the traditional tech mold.

Qodix is a product development company based in North Macedonia.
We design, build and support software products.

Startups are born everywhere. But sometimes, real tech chaos begins when two engineers and close friends get a 30+ person team and a navy client from the Southern Hemisphere.

7

years of building software

30+

people on our team

7+

years of average experience per engineer

6

countries across Europe, Africa and South America. Based in N. Macedonia. Trusted globally.

WHAT WE BUILD

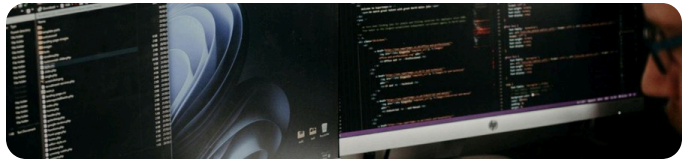

Full-cycle engineering, from wireframe to production.

Web applications

Responsive, high-performance web apps, from intuitive interfaces to powerful backend integrations.

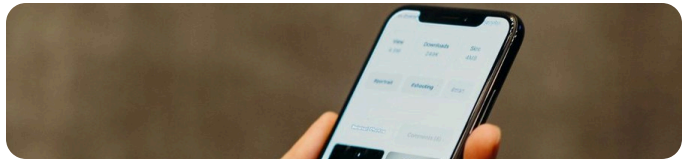

Angular · TypeScript · JavaScript · PWA

Backend & data

Scalable, secure APIs, databases and business logic that integrate cleanly with other services.

Node.js · Python · Go · REST · gRPC · MongoDB · Redis · OpenSearch

Mobile apps

Fast, reliable cross-platform apps for iOS and Android that connect smoothly to your backend.

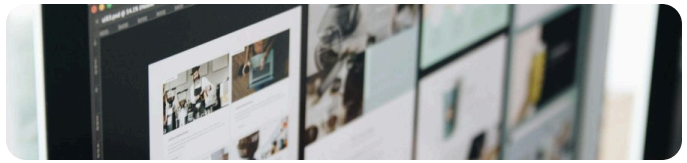

Flutter · Dart · iOS · Android

DevOps & cloud

Automated deployments, infrastructure-as-code and cloud migration for reliable releases.

AWS · Azure · Google Cloud · Kubernetes · Docker · Terraform · GitLab CI · GitHub Actions

UX/UI & research

User-centered interfaces backed by research and testing, balancing usability, branding and function.

Figma · Illustrator · Prototyping

Hardware & IoT

From device firmware to cloud: connected products with real-time data and remote control.

Arduino · Raspberry Pi · ESP32/ESP8266 · Custom IoT

WHAT WE SPECIALIZE IN

Our focus: fintech, banking, AI and security.

01

Fintech & payments

Secure, scalable payment platforms, digital wallets and money transfer products, with compliance, KYC and a smooth user experience built in.

IN PRACTICE

- Payment provider
- Money transfer
- KYC

02

Blockchain

Asset tokenization, smart contracts and blockchain platforms, built on open standards such as ISO 20022 and Stellar.

IN PRACTICE

- DAMREV
- Orbiko

03

Core banking systems

Reliable systems at the heart of banking: accounts, transactions, bank integrations and regulatory reporting that stand up to scrutiny.

IN PRACTICE

- Bank integrations
- National bank reporting

04

AI

AI built into real products, and rescue for stalled AI projects that need an experienced team to get over the line.

IN PRACTICE

- Refil.io
- AI project rescue

05

Security

Security audits and secure-by-design engineering, so your systems and products are protected before they reach production.

IN PRACTICE

- Security audits
- Secure-by-design

Trusted by clients in six countries

We also build IoT and smart access products, logistics software and SaaS.

Belgium

United Kingdom

Italy

N. Macedonia

South Africa

Chile

OUR PRODUCTS

Born at Qodix Innovation Lab.

Refilio

Five messages in. One order out.

AI-powered ordering between businesses and their suppliers. Staff scan a QR code on a shelf, fridge or coffee machine, and Refil.io merges every scan and message into one clean order for the supplier.

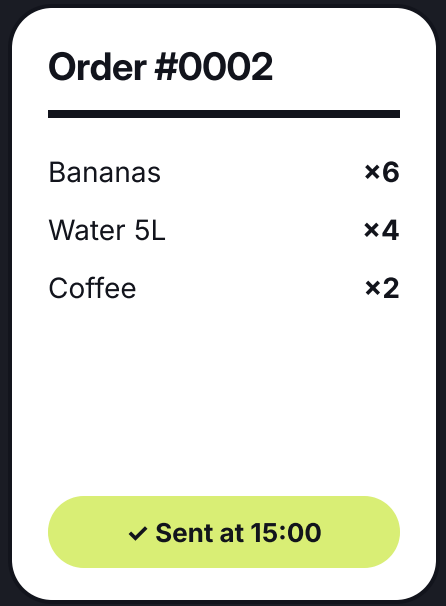

Scan a QR code to reorder in seconds, no app needed

Merge all requests into one daily order

Order in plain words with AI, matched to the supplier's catalog

In pilot in North Macedonia

refil.io

SMART ACCESS

QOAS

A hardware-software access control system for coworking spaces, villas and other shared properties. Mobile app, QR code and PIN entry give 24/7 access without a receptionist, with user tracking and temporary guest permissions. Running in our own coworking space.

Mobile app · QR code · PIN · Guest access · Remote control

SAAS

ReliMail

A lightweight, privacy-first email platform with custom domains, built for businesses that want control of their data. Live and in use as a SaaS product.

Custom domains · Privacy-first · Live SaaS

PARTNERED PRODUCTS

Platforms we built with our partners.

FINTECH & BLOCKCHAIN

DAMREV

A platform that tokenizes real-world assets for global, blockchain-based investment.

CHALLENGE

Build a secure, scalable platform to tokenize real-world assets with compliance and investor trust.

SOLUTION

A modular platform with ISO 20022 tokenization, smart contracts and KYC for diverse assets.

DELIVERY & OUTCOME

A six-person team launched the platform with a mobile app, admin portal, developer API, marketplace and Stellar explorer.

ISO 20022 · Stellar · Smart contracts · KYC

FINTECH · NORTH MACEDONIA

Online payment provider

A compliant digital payment platform for a fintech startup.

CHALLENGE

A secure, scalable system with bank integrations, automated KYC and national bank reporting.

SOLUTION

Payment processing, government KYC integrations and transaction tracking tied to the national bank.

DELIVERY

A mobile and web platform with admin tools and a user dashboard, built for speed, security and regional growth.

Bank integrations · Government KYC

OPERATIONS SOFTWARE · BELGIUM

Cleaning services platform

A platform for a Belgian cleaning company to run appointments, teams and operations.

CHALLENGE

Replace spreadsheets and manual coordination with one real-time system for cleaners, appointments, salaries and vacations.

SOLUTION

Drag-and-drop scheduling, role-based access, cleaner tracking and tools for payments, vacations and communication.

DELIVERY & OUTCOME

Dispatchers now schedule jobs and coordinate cleaners in one portal, replacing spreadsheets. We also built apps for cleaners and customers.

Admin portal · Mobile apps · Real-time tracking

PARTNERED PRODUCTS

More work across industries.

FINTECH & BLOCKCHAIN

Orbiko

Merging gold's stability with blockchain speed, now offering silver and platinum as tokenized investments.

FINTECH

Real-time money transfer

Fast, secure and compliant cross-border payments, with a WhatsApp bot for transfers and support.

EDUCATION

E-learning platform

Face detection tracks student engagement and satisfaction in real time.

HARDWARE & IOT

Enzyme dosing pump

Automated dosing for precise fuel treatment, better efficiency and reduced environmental impact.

GREENTECH & SCADA

Solar panel monitoring

Real-time performance tracking, fault detection and energy optimization.

TRANSPORT & LOGISTICS

Transport & cargo platform

Real-time truck tracking, route optimization, cargo monitoring and integrated payment management.

E-COMMERCE

SEO-focused e-commerce

High-performing landing pages tuned for Google Lighthouse and clean SEO structure, supporting multiple clients at scale.

HOW WE WORK

From idea to scalable product.

Six clear stages, with transparent communication and shared ownership of outcomes from the first call to long after launch.

1

Discovery & planning

We align with your goals, analyze requirements and define a roadmap tailored to your business needs.

2

UX/UI design

User-focused design with wireframes and prototypes that balance usability, branding and functionality.

3

Development

Full-stack, iterative development with modern tools, flexible for both MVPs and large-scale systems.

4

Testing & QA

Rigorous manual and automated testing for stability, performance and security at every release.

5

Deployment & DevOps

Automated deployments, scalable infrastructure and CI/CD pipelines for smooth, reliable releases.

6

Support & growth

We stay involved post-launch with maintenance, performance monitoring and feature evolution.

Lean, senior-led teams

Small, focused teams with high impact, led by experienced engineers.

Business, design and tech under one roof

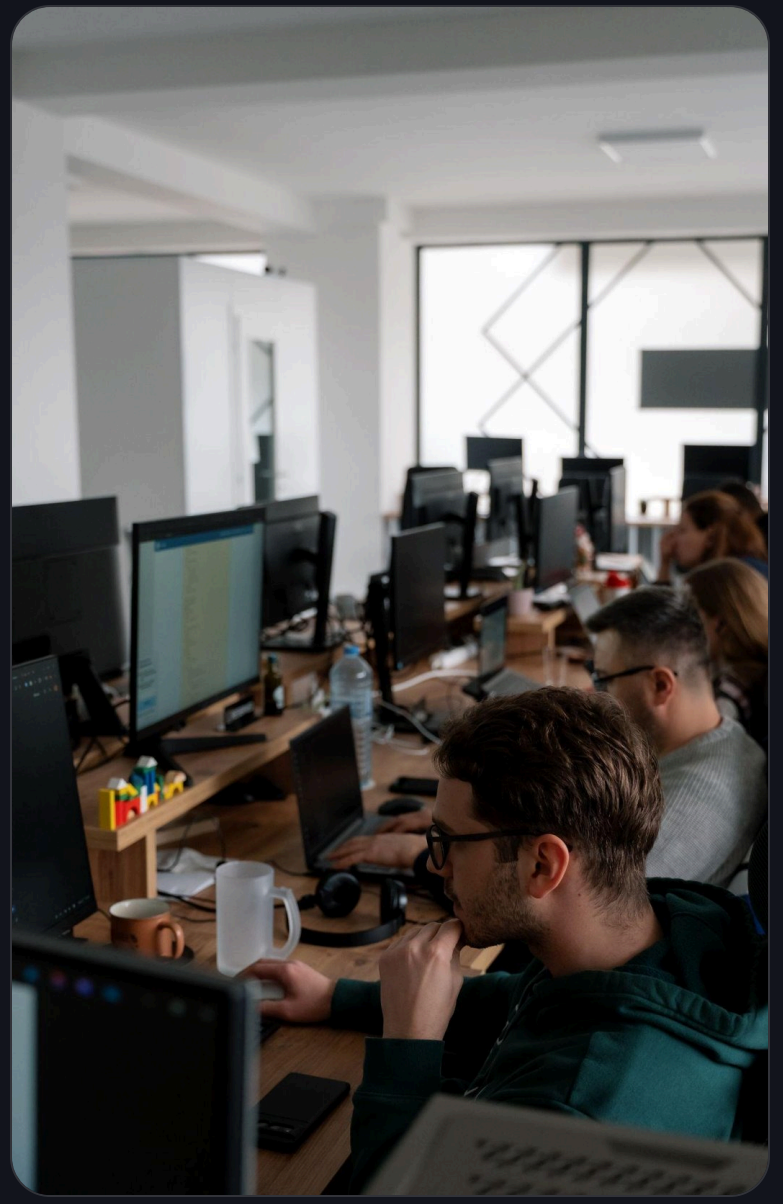

We support every stage of your journey with business, design and technical expertise.

WHY QODIX

Your trusted tech partner for the long run.

We help you launch your product and stay involved as it grows.

01	**Startup mindset, enterprise quality**	Agile, fast-moving and cost-efficient, without compromising stability, security or scalability.
02	**Lean, senior-heavy teams**	Small, focused teams led by experienced engineers, averaging 7+ years of experience.
03	**Full-cycle product thinking**	From idea to deployment, with business, design and tech expertise at every stage.
04	**Flexible collaboration**	Engagement models that match your workflow, with transparent communication and shared ownership.
05	**Relationships that last**	We aim for long-term partnerships, not one-off projects. Many of our clients stay with us for years.

ENGAGEMENT MODELS

Work the way that suits your product.

Whether you are building an MVP, scaling a mature product or need long-term support, we adapt to your pace and priorities and offer the right model to keep things efficient, transparent and collaborative.

MODEL 01

Dedicated team

A handpicked team that works as an extension of your company, with full control over the process.

BEST FOR

Long-term collaboration on products that need ongoing development.

MODEL 02

Time & material

Pay only for the time and resources used, with the flexibility to change direction as you learn.

BEST FOR

Evolving projects and MVPs with requirements still taking shape.

MODEL 03

Fixed price

Clearly defined scope and deliverables with a set budget.

BEST FOR

Small-to-mid projects with well-established requirements

MODEL 04

Phased delivery

Structured delivery that keeps control, clarity and success at every step.

Discovery | MVP | Rollout

BEST FOR

Complex products that need staged investment

Not sure which fits? We will help you choose after a first conversation about your goals, scope and timeline.

LET'S TALK

Ready to build something great together?

Got complex processes? We turn them into software that just works.
